

DECEMBER 2007 WEBSITE REPORT

ESSEX ALUMINUM

As of right now we have 506 in the plant, this is 173 trades and 333 production. For the very near future there are no down weeks expected at the EAP plant. Again the Windsor Star has printed a article that is full of misinformation. This is the same person that said there was a diesel engine going to EEP. What I am saying is when you read something in the Windsor Star take it at face value.

We our still running at a 33 mph and it is on a regular basics, but low and behold there is still no talk or movement on new product. You can see all the time where they try to cut jobs but always increasing Supervision. We all have to work together to keep the jobs this means that we stay on the job unless we are on BREAK. Over-time how much simpler can I make this, IF WE DON" work it, they will have to bring people back to work. Individuals are not as strong as a group. Remember always be safe.

Frank Kotow
Plant Chairperson
