

## **APRIL 2008 WEBSITE REPORT**

### **WINDSOR ALUMINUM**

Plant population right now is 178 production, 75 Trades, 18 TPTs. Last month I reported they would run the 3.0 litre block on the north line 3 shift and they would shut down the south line, when they reached the production number of 300 a shift. Well, 2 weeks ago they were to shut the south line down but instead they shut the north line down to do some reworking of the talc system.

On May 12/08 the north line is to start up and south line goes down. We also had a reduction of 3 people in the Finish Department back in April 21/08 now we will be getting these people R.T.R. back to the Finish Department which is good news, because the numbers for the 3.0 L went up. Cleveland Engine is putting off there line reduction for now. I don't know if this is because of the gas prices or not but this is good news for our plant.

G.M. expansion was working 19 out of 21 shifts at this time they are running 5 Days a week 3 shifts the numbers are at 1,313 a Day.
