

MARCH 2007 WEBSITE REPORT

ESSEX ALUMINUM

As of now we have 606 production and trades in EAP. We have had 15 TPT's who elected to take the STEP program and to you all the best in all your endeavors. TMEP area has been running extremely well over the last 9-10 weeks. With an average of over 30MPH, the employees required, and the equipment being taken care of, it is not a problem doing this kind of production. Along with the 5.4 head running so well the Base is also running great. Mold averages between 33 and 37 an hour per shift is incredible. Again When we are given the material and the employees we need we will do it.

O/T for people that don't understand JUST SAY NO when it comes to over time. It might be hard the first couple times but it does get easier. Once you do say no in the long run it could be your job that you are saving.

Take action. When you are asked to take part in union functions please take part. The more people that are involved the stronger we become. It is not hard to take 4-5 hours a month out of your busy days to help your future.

Be safe and take care

Frank Kotow
Plant Chairperson
